

Description

The print cylinders are made using special aluminium material or steel. To reduce the weight of them we use the tube material. All the cylinders are supplied with the standard gears in high accuracy (8/9) or for special applications we can supply hardened and ground gears (5/6). To protect the surface of printing cylinders we also anodized them. The print cylinders are made of standard aluminium along with the gears and also with the additional components such a shafts, bearers, register rings and others. We manufacture the print cylinders for all the Flexo machines.

Technical Details

- Made of steel or aluminium
